

Quick Guide Plus to...

Chartered Engineer (CEng) Standard Route

Short Guidebook for Applications

Members and Fellows of CICES who hold a suitable academic base for CEng registration can take the Standard Review process in order to achieve registration with the Engineering Council as a Chartered Engineer.

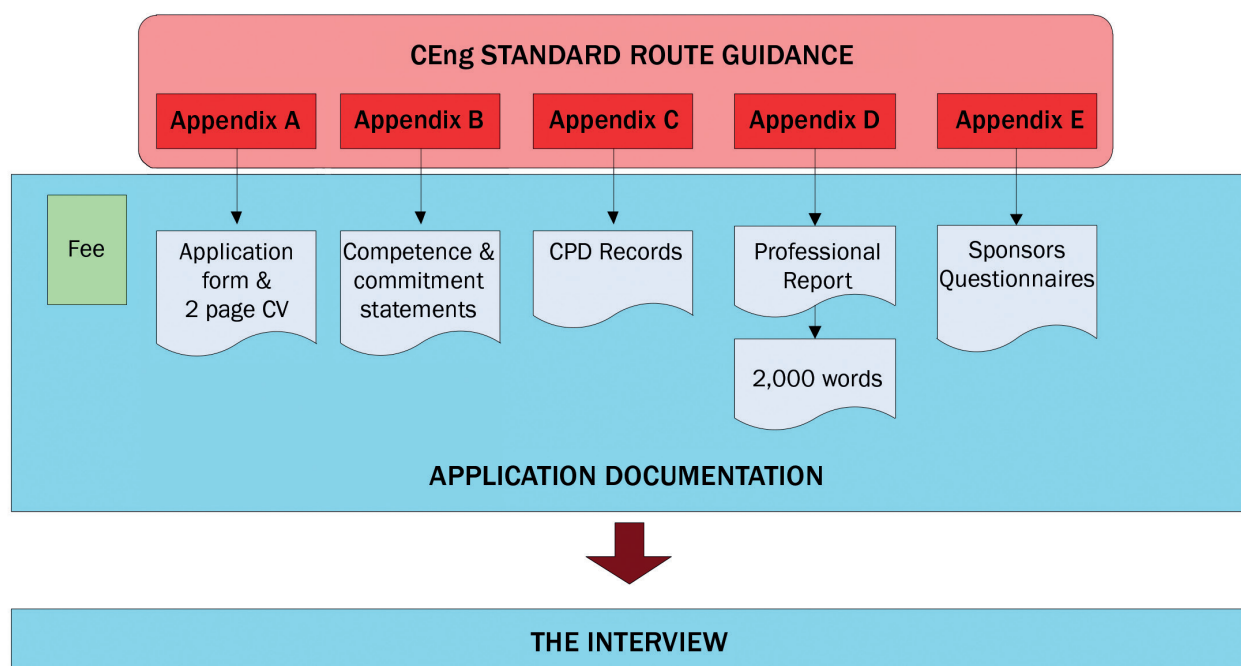

Those who are interested in finding out more should consult 'Standard Route for Professional Registration to Chartered Engineer' and the Engineering Council 'UK- SPEC', both of which can be downloaded from the CICES website (cices.org).

Candidates will be expected to show a high level of engineering knowledge and understanding within the context of their particular role as a civil engineering surveyor.

Candidates must submit:

- An application form.
- An application fee.
- Completed Engineering Council competence and commitment statements (approx 2,500 words).
- Two page CV.
- A 2,000 word Professional Report. The Professional Report should describe the structured training and responsible experience that you have gained in your experience to date.
- Three years of CPD records.
- Sponsors Questionnaires. Whilst all three sponsors should know you well, and be convinced through direct experience, that you are a fit and proper person to be recommended for registration, the Lead Sponsor should additionally become familiar with the current standards required for assessment. The Lead Sponsor must read and sign submitted reports along with the relevant competence and commitment statements.

Flowchart

The Interview

A Professional Review is to determine whether you possess the required knowledge and understanding of the UK-SPEC competencies. You will have up to 15 minutes to deliver your presentation based on your report. The overall duration of the professional review is around 75 minutes.

If you are successful at the Professional Review your name will go forward for recommendation to be awarded registration with the Engineering Council as a Chartered Engineer.
